Document and Review Patient Key Activities

This help topic will cover the use of the **Patient Key Activities** component in the patient chart.

The **Patient Key Activities** component is a tool intended to be used by clinicians to aid in shift handover by communicating a brief synopsis of a clinically significant event (e.g. patient fell and had head injury) or change in the patient's condition or treatment (e.g. left lateral chest tube has been removed) to other clinicians. Only Nurses and Respiratory Therapists can document patient key activities. Other clinicians have read-only access to this information.

> **NOTE**: For further information related to the tools and functionalities available within CST Cerner that can aid handover process, please refer to the help topic: Handover for Clinicians (Inpatient).

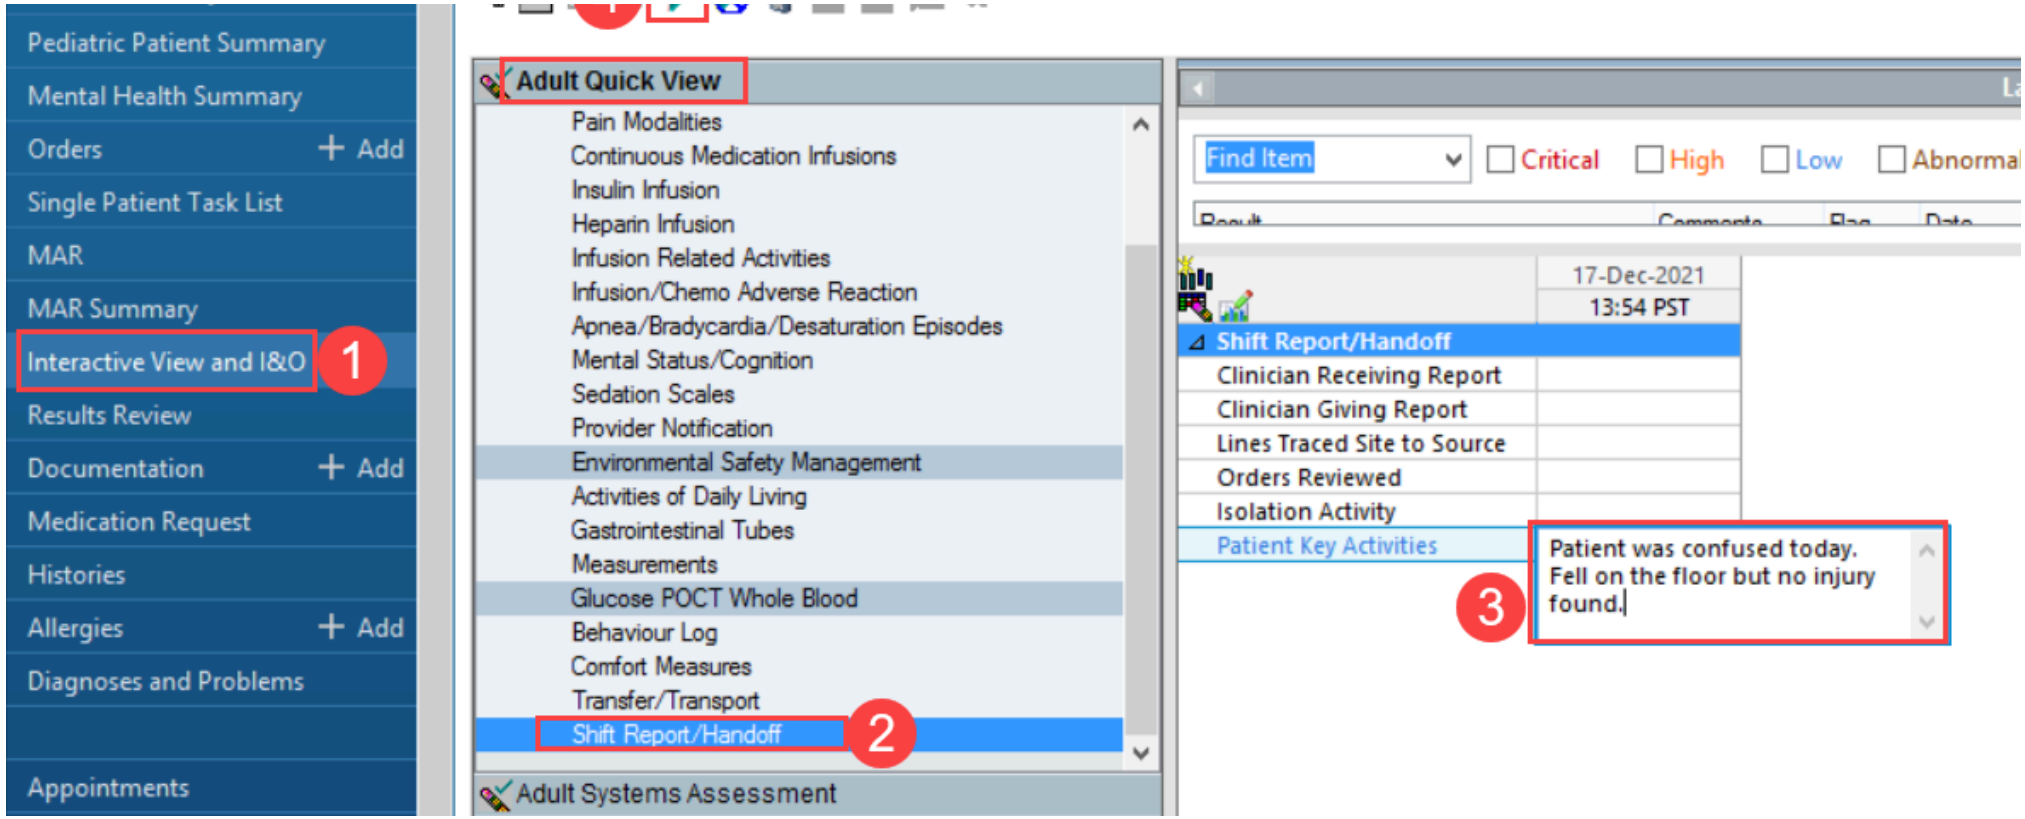
- To look up site specific policies regarding guidance on what constitutes a patient key activity for the purposes of documenting in the Patient Key Activities component, clinicians should refer to **Shared Health Organization Portal (SHOP)**.
- Patient safety event can be one of the patient key activities happened on that shift. Documenting this event in the Patient Key Activities component **DOES NOT** replace the need to document care provided in other appropriate areas of the patient chart.
- For example, when a patient fell on the floor and had head injury, document the description of the fall event (including date/time of the incident occurred), patient assessment, and post fall interventions in **Post Fall Evaluation** iView section. At the end of shift, document a brief summary of the fall event and patient outcome in **Patient Key Activities** field within **Shift Report/Handoff** iView section.
- Documenting patient's clinically significant event(s) in the Patient Key Activities component **DOES NOT** replace site policy to report patient safety event(s) through BC **PSLS** reporting system.

Document Patient Key Activities in IView (Nurse)

1. Navigate to **Interactive View and I&O** from the **Menu**.
2. Select the **Shift Report/Handoff** section in **Quick View** band (e.g. Adult Quick View) or equivalent band (e.g. Labour and Delivery, OB Postpartum, Periop Safety Departure).
3. In the **Patient Key Activities** free text field, document a brief summary of the patient's clinically significant event or change in the patient's condition/treatment.

> **NOTE**: To encourage brevity, individual entries to this field have been limited to a length of 255 characters.

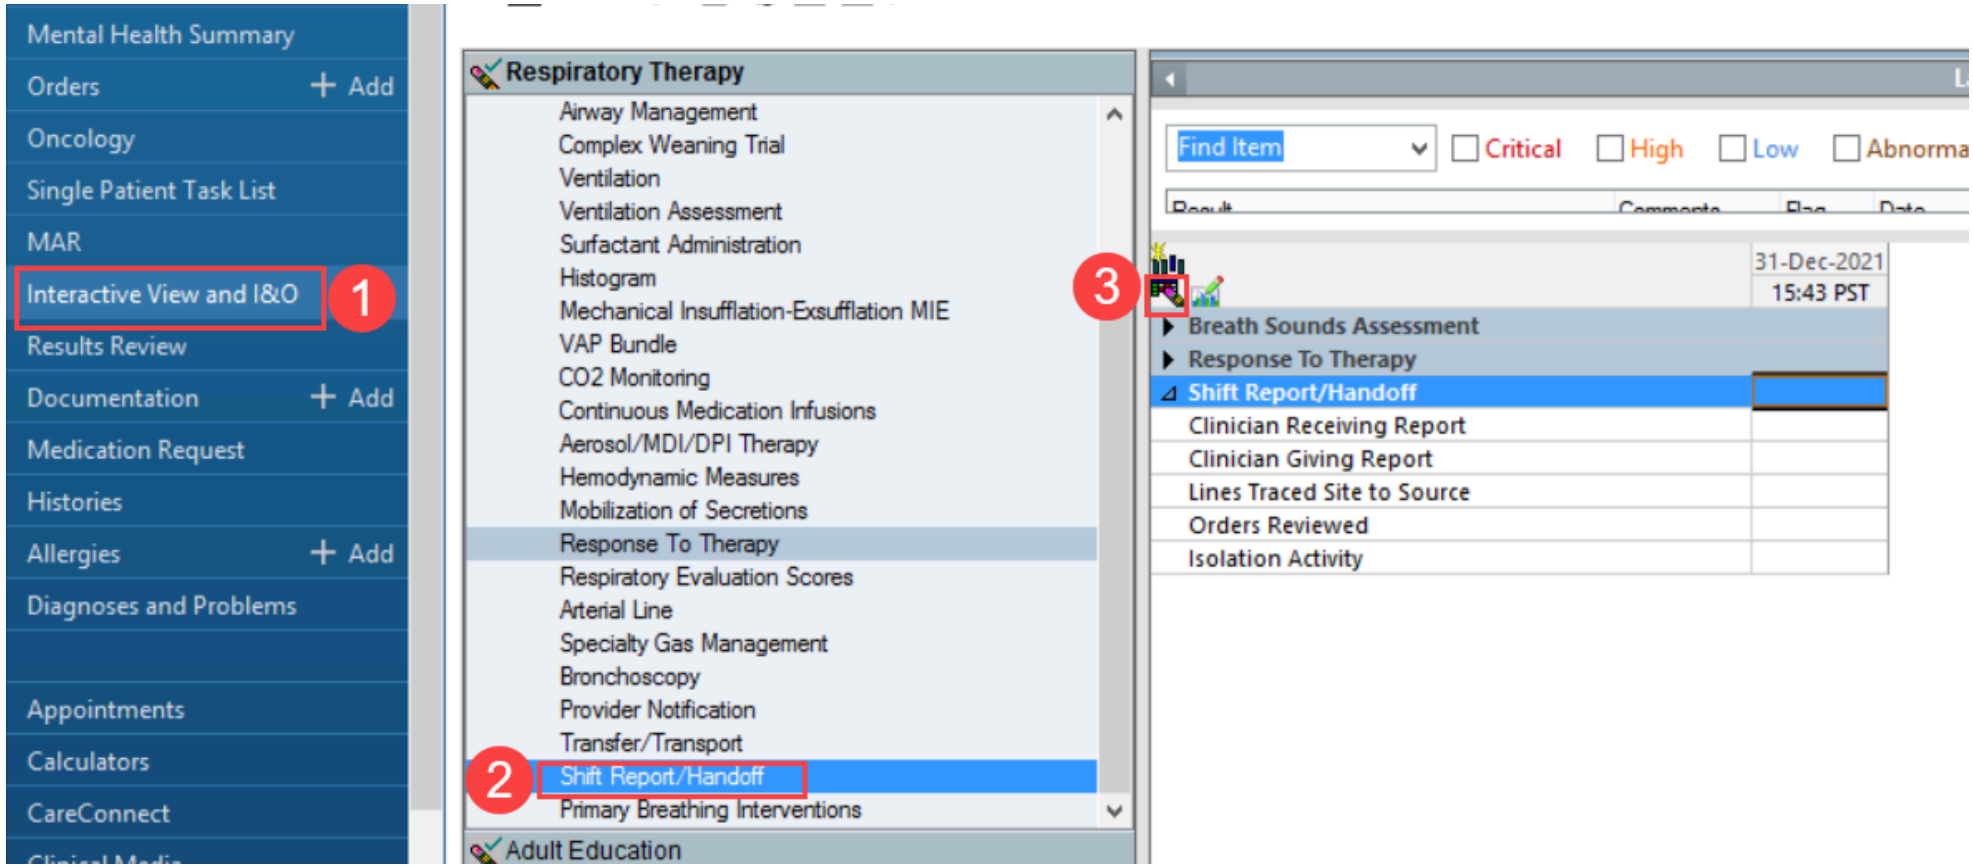
4. Click the **Sign** icon to complete the documentation.



Document Patient Key Activities in IView (Respiratory Therapist)

The **Patient Key Activities** field does not default open in iView for Respiratory Therapists when no patient key activity has been previously documented in the chart. Follow the steps below to manually add this field before starting documentation:

1. Navigate to **Interactive View and I&O** from the **Menu**.
2. Select the **Shift Report/Handoff** section in **Respiratory Therapy** band.
3. Click the **Customize View** icon.



4. Add a checkmark in the tick box beside **Patient Key Activities**.
5. Click **OK**.

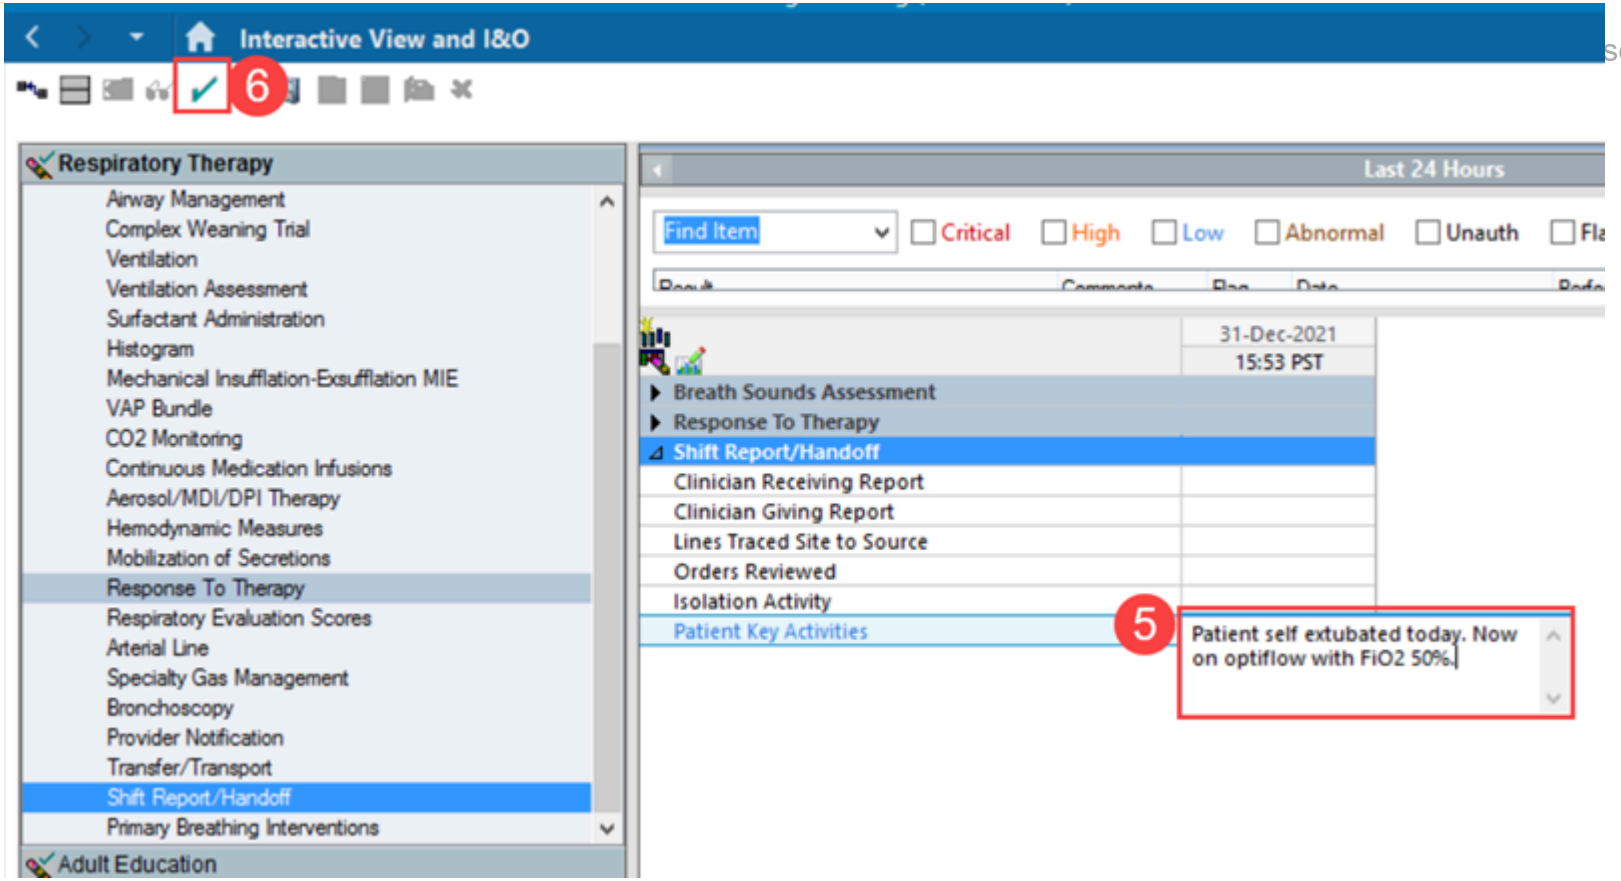
6. In the **Patient Key Activities** free text field, document your entry in accordance to local site policies.

> **NOTE**: To encourage brevity, individual entries to this field have been limited to a length of 255 characters.

7. Click the **Sign** ✓ icon to complete documentation.

see this page in full context



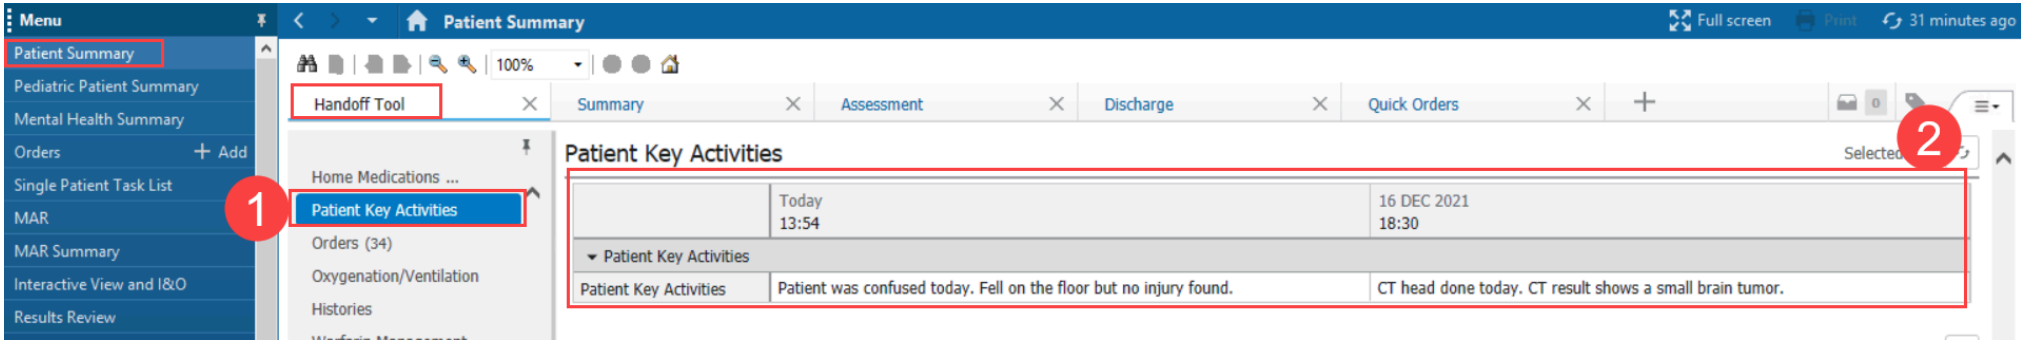
NOTE: If the patient key activities information has been documented in iView by a Nurse, the **Patient Key Activities** field will automatically open in the **Shift Report/Handoff** section with documented information pre-populated.

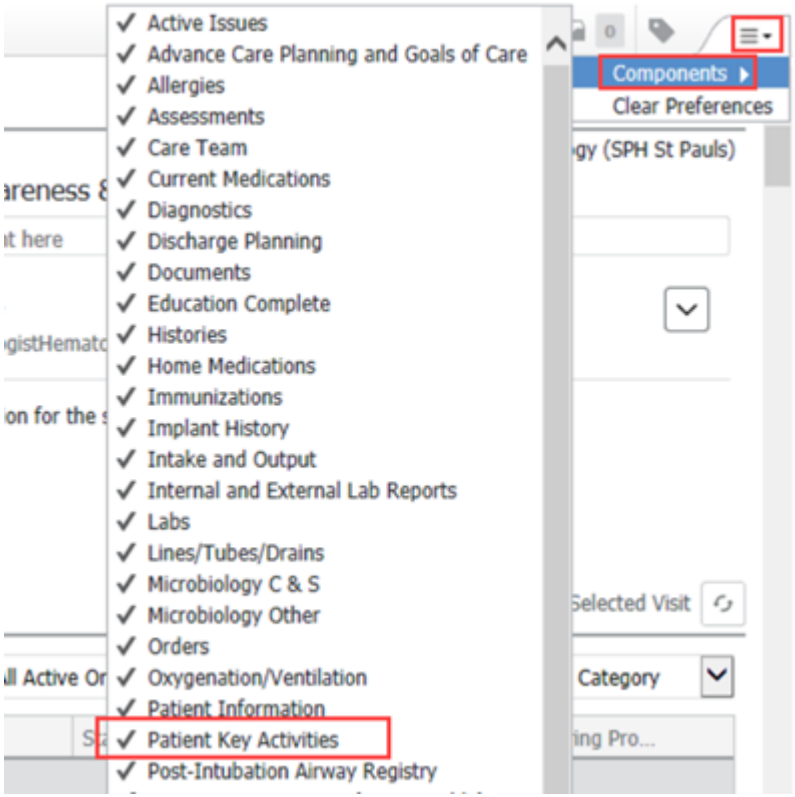
Review Patient Key Activities

Patient key activities that are documented in iView are pulled into different parts of the patient chart for review.

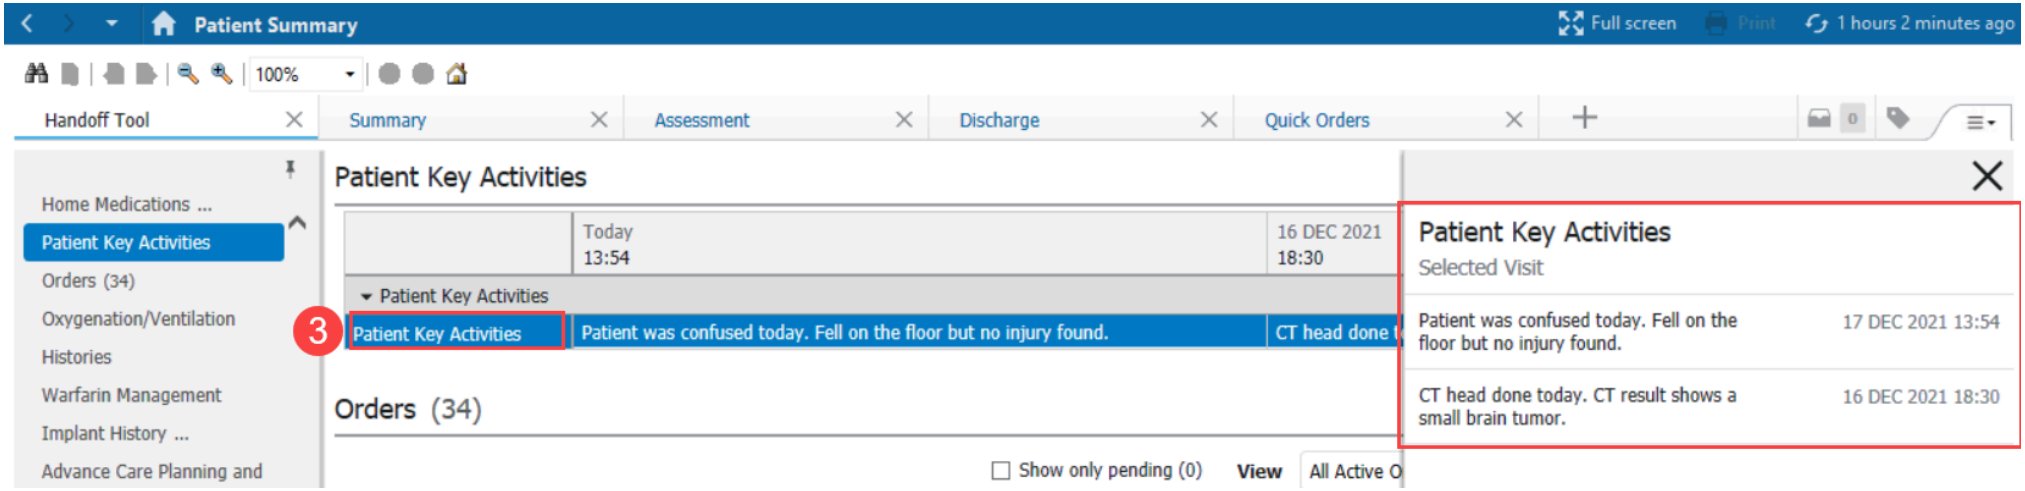
events on the Kardex.

1. Navigate to the **Patient Summary** workflow page or equivalent (e.g. Pediatric Patient Summary, Respiratory Therapy View) from the **Menu** and locate **Patient Key Activities** component in **Handoff Tool** or **Pediatric Handoff**.
2. Documented information displayed in the **Patient Key Activities** component is in **reverse chronological order** with previously documented events locate on the right side of the component section whereas the most recent documented events are found on the left side of the section.

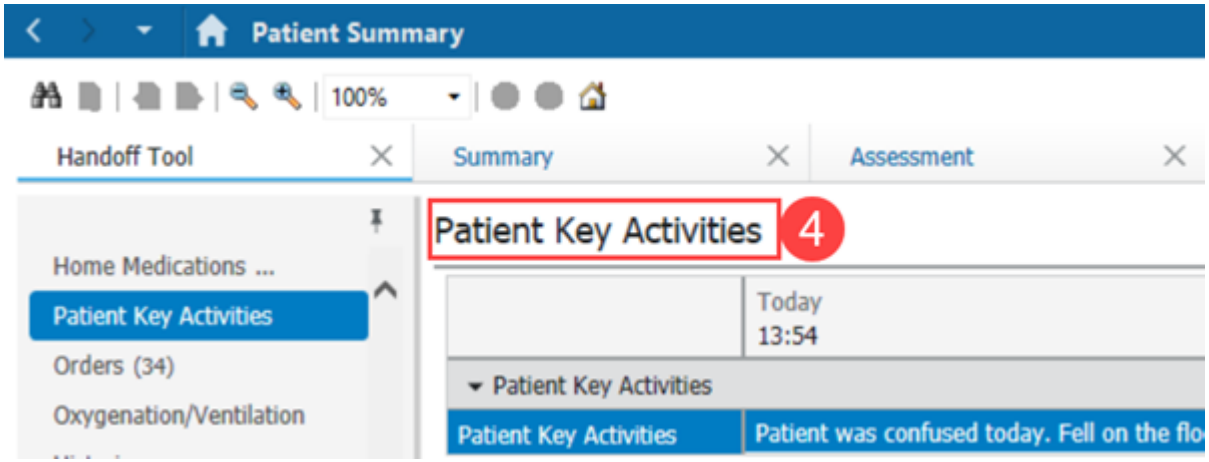




3. Click on the **Patient Key Activities** row heading to show a list of entries in the sliding window.



4. Click the **Patient Key Activities** component heading to direct you to **Results Review**.



B. Review Patient Key Activities Flowsheet in Results Review

1. Navigate to **Results Review** from the **Menu** or by clicking the **Patient Key Activities** component heading on the workflow page.
2. Select **Patient Key Activities** from the **Flowsheet** drop-down to display the documented results.

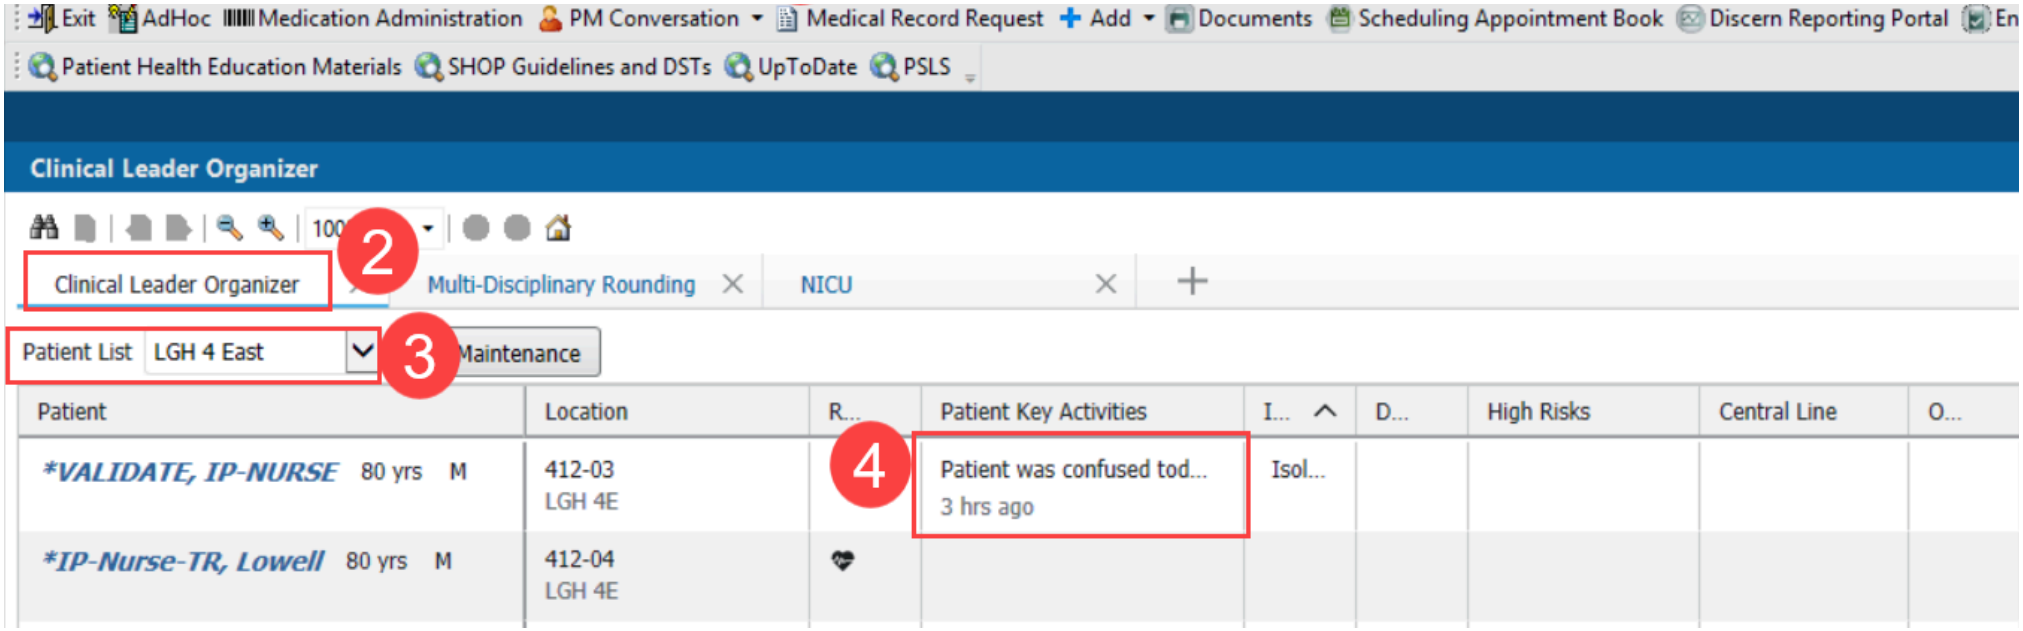
C. Review Patient Key Activities Column in Clinical Leader Organizer

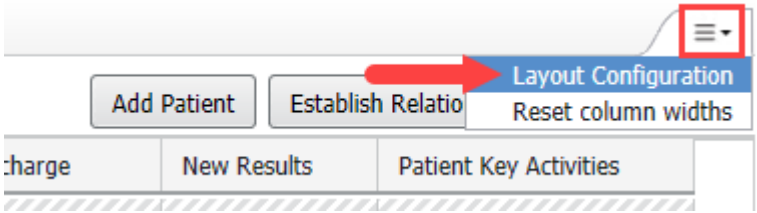
Clinical Leader Organizer is a tool for charge nurses and other clinicians to review the most recent significant events for the patients in their patient list.

1. Click the **Clinical Leader Organizer** on the toolbar.
2. Select the **Clinical Leader Organizer** tab.
3. Select an appropriate patient list.
4. Once the relationship has been established, more information that is pulled from various parts of the chart displays in **Clinical Leader Organizer**.

   The most recent entry for each patient on the selected patient list displays in the **Patient Key Activities** column.



NOTE: If the **Patient Key Activities** column is not visible, select the **Layout Configuration** button in the top right corner and ensure that there is a checkmark beside the **Patient Key Activities** component by selecting it.



5. Click in the **Patient Key Activities** field to review three most recent entries for the selected patient in the sliding window.
