CST Cerner Help

CST Cerner Help

Handover for Clinicians (Inpatient)

The handover process between each unit may differ dependent on your unit process.

This quick reference guide will only include information related to the tools and functionalities available within CST Cerner that can aid this process. Certain topics may be specific to certain disciplines or care areas. The following topics will be covered:

Review the Handoff Tool

The **Handoff Tool** tab consists of an overview of patient information that is useful for handover between the oncoming and off-going clinicians. The different sections of the **Handoff Tool** tab include the following:

- Team Communication (Discoverable)
- Active Issues
- Micro Cultures
- Diagnostics

CST Cerner Help

Click here to see this page in full context

- Allergies
- Vital Signs and Measurements
- Documents
- Transfer/Transport/Accompaniment
- Assessments
- Lines/Tubes/Drains
- Intake and Output
- Labs
- Current Medications
- Home Medications
- Orders (see below)
- Oxygen and Ventilation
- Pathology
- Histories
- Transfusion History
- Patient Key Activities

NOTES:

- Select **Pediatric Handoff** tab in **Pediatric Patient Summary** to review pediatric specific information during handover.
- For additional information including flagged events, refer to the **Assessment** tab in **Patient Summary** or **Pediatric Patient Summary**.
- Documented significant events or changes in patient's condition/treatment can be reviewed in **Patient Key Activities** component of **Handoff Tool** or **Pediatric Handoff**. For further details about documenting and reviewing patient key activities, please refer to the related help topic.

Review Orders in Handoff Tool

From within the **Handoff Tool** tab, you can review and reconcile any orders that have been placed in the patient's chart. Pay close attention to **Communication Orders** clinical category to guide your care for the patient.

NOTE: For any **modifications** to orders, use the Order Profile- not the Handoff Tool. **The Handoff Tool is for review only**.

Orders (40) Selected visit

Pending Orders (0) | Group by: Clinical Category | Show: All Active Orders

Type	Order	Start	Status	Status Updated	Ordering Provider
Laboratory (1)					
	Group and Screen Blood, Routine, Collection: 26-Jan-2018, once, Order for future visit	26/01/18 08:00	Future (On Hold)	25/01/18 13:31	TestCST, OncologistHematologist-Physician1 ON, MD
Respiratory (1)					
	Oxygen Therapy 27-Feb-2018 10:51 PST, Routine, 10 L/min if naloxone required and notify treating provider	27/02/18 10:51	Ordered	27/02/18 10:51	TestOS, GeneralMedicine-Physician11, MD
Communication Orders (1)					
	Notify Treating Provider 27-Feb-2018 10:51 PST, If unresponsive to all antiemetic medications	27/02/18 10:51	Ordered	27/02/18 10:51	TestOS, GeneralMedicine-Physician11, MD

- **Communication Orders** are FYI orders that do not go to the Task List. The order will go to CareCompass for review only and will stay on the order profile in the patient's chart.
- A **Conditional Order** is an "**if"… then"** order. The nurse receives directions to place an order or modify an order **if** certain conditions are met.
- A **Notify Provider** order is used to indicate when nurse should call the provider.

Review Task List and Chart Done or Document Appropriately

During handover, the clinician handing off should review their task list one final time.

1. Review patient task list from **CareCompass**, **MPTL**, or **SPTL**.
2. If tasks were completed during the shift, it is appropriate to clear them by selecting **Chart Done** or **Document**.

NOTE: If a one-time task was not completed and still needs to be completed by the next clinician, communicate this with the oncoming clinician. **DO NOT** select **Chart Not Done** as this will remove the task from the patient's task list completely and the task will not get done.

Review **MAR** to make sure medication tasks have been signed off appropriately.

- If there are overdue medication tasks on the **MAR** at handover, the off-going nurse should chart **Not Given** if the medication was not given during their shift (and will not be given 'late' by the next nurse)

Document Handoff in Interactive View and I&O

Once you have given report to the oncoming clinician, it can be documented in **Interactive View and I&O**.

1. Select **Interactive View and I&O** from the **Menu**.
2. Select **Shift Report/Handoff** section from the appropriate **Quick View** band**.**
3. Document applicable information including clinician giving report and receiving report, lines traced site to source, orders reviewed, isolation activity (if applicable), and patient key activities.
4. **Sign** your documentation.

Shift Report/Handoff	
Clinician Receiving Report	Nurse 1
Clinician Giving Report	Nurse 2
Lines Traced Site to Source	Yes
Orders Reviewed	Yes
Isolation Activity	Initiate
Patient Key Activities	Fell on the floor today but no injuries found.

3

NOTE: A patient key activity refers to a clinically significant event or change in the patient's condition or treatment that is important to share with other health care team members. For further details about Patient Key Activities documentation and review, please refer to the help topic – Document and Review Patient Key Activities.

REMINDERS:

- Documenting patient's clinically significant event(s) in CST Cerner **DOES NOT** replace site policy to report patient safety event(s) through BC PSLS reporting system.
- Documenting patient key activities **DOES NOT** replace the need to document care provided in other appropriate areas of the electronic health record (EHR).

NOTE: Aside from reviewing the **Handoff Tool**, it is still important to review other parts of the patient chart including **CareCompass**, orders, etc., as per current practice.
