CST Cerner Help

CST Cerner Help

iAware / CareAware Critical Care (CACC)

CareAware Critical Care (CACC) (also called **iAware**) provides an interactive dashboard that aggregates critical patient information from multiple sources (such as vital signs, IV drips, intake and output), allowing providers and clinicians to gain an understanding of the complete picture of the patient at a glance.

> **NOTE**: To customize the view of **iAware/CACC**, please refer to the help topic – iAware / CareAware Critical Care (CACC) Personalization.

Access iAware/CACC

iAware/CACC can be accessed from the toolbar within the patient's chart.

1. Click on the **iAware** button 
on the toolbar.

   The **iAware/CACC** will launch and display patient specific information.

2. The blue banner bar at the top of the screen provides patient specific information including patient demographics, dosing weight, actual weight and allergies.

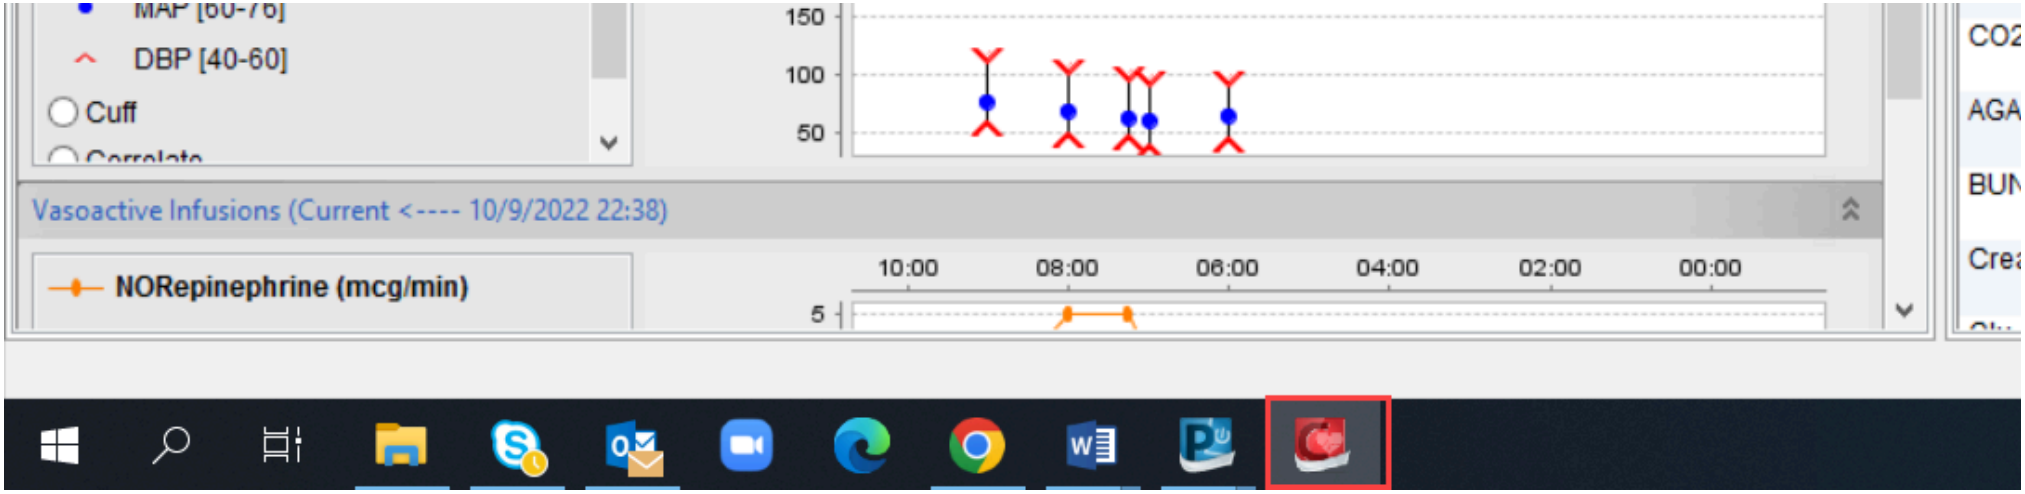
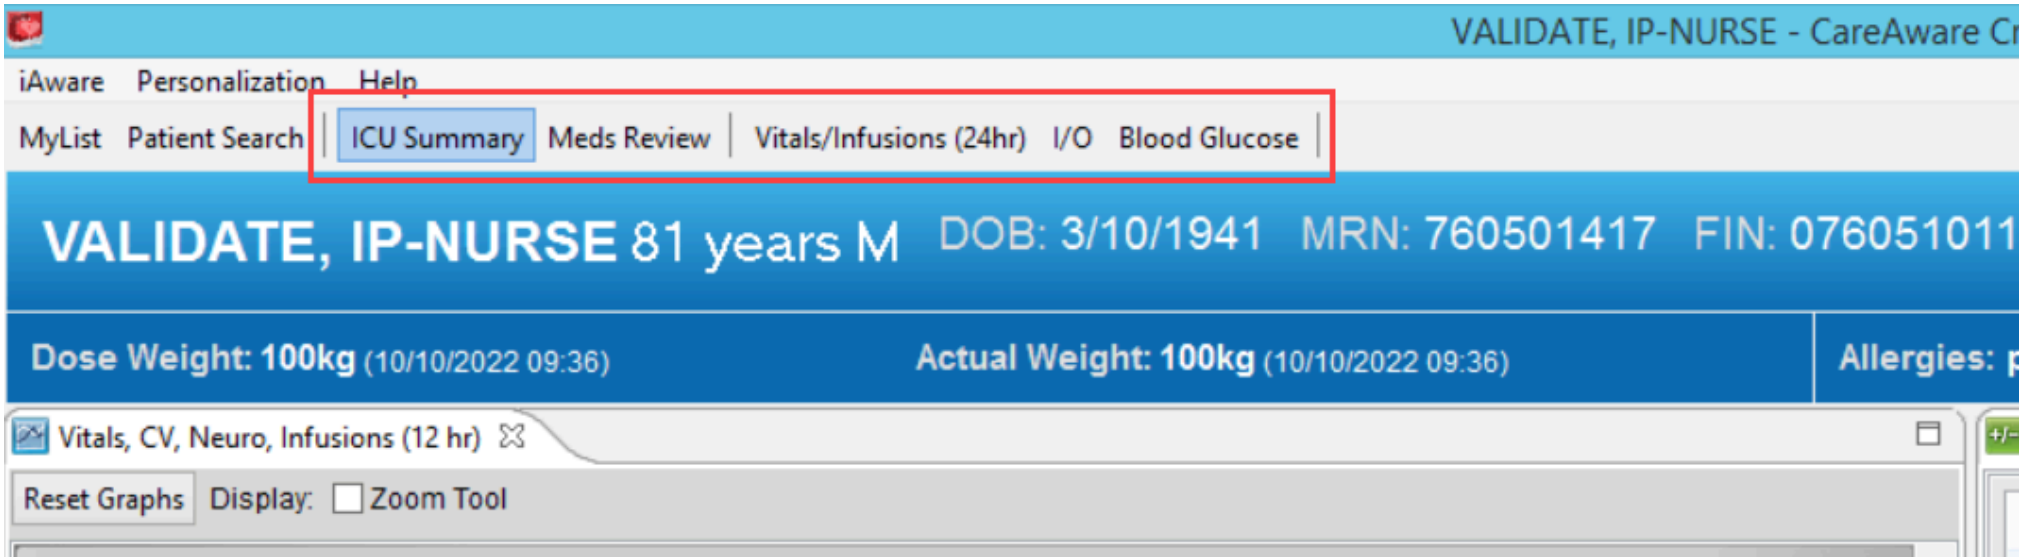
3. It is recommended that **iAware/CACC** is opened at the start of shift and left opened throughout the day. It can be refreshed as needed to see the most up to date information.

4. When opened, the **iAware/CACC** icon will appear at the bottom of the screen. This is how **iAware/CACC** will be accessed throughout the day.



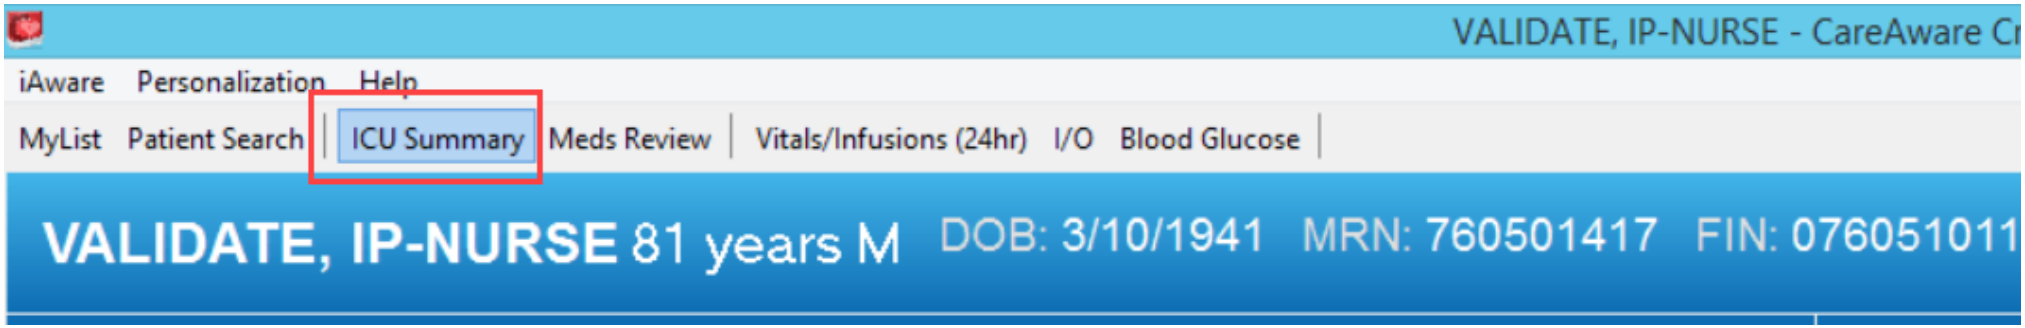
5. Different sections can be accessed from the toolbar including ICU Summary; Meds Review; Vitals/Infusions (24hr); I/O; and Blood Glucose.

> **NOTE**: **iAware/CACC** is to be used to support handoff and rounding.



The **ICU Summary** will be the first section of the **iAware/CACC** that displays when you launch the application. The **ICU Summary** is a dashboard that displays various sources of clinical information including Vital Signs, CV, Neuro, Infusions; Intake and Output; Labs and Respiratory/Ventilator values.

1. Click **ICU Summary**.



2. Review ICU Summary sections: Vitals, CV, Neuro, Infusions; I/O; Labs and Respiratory.

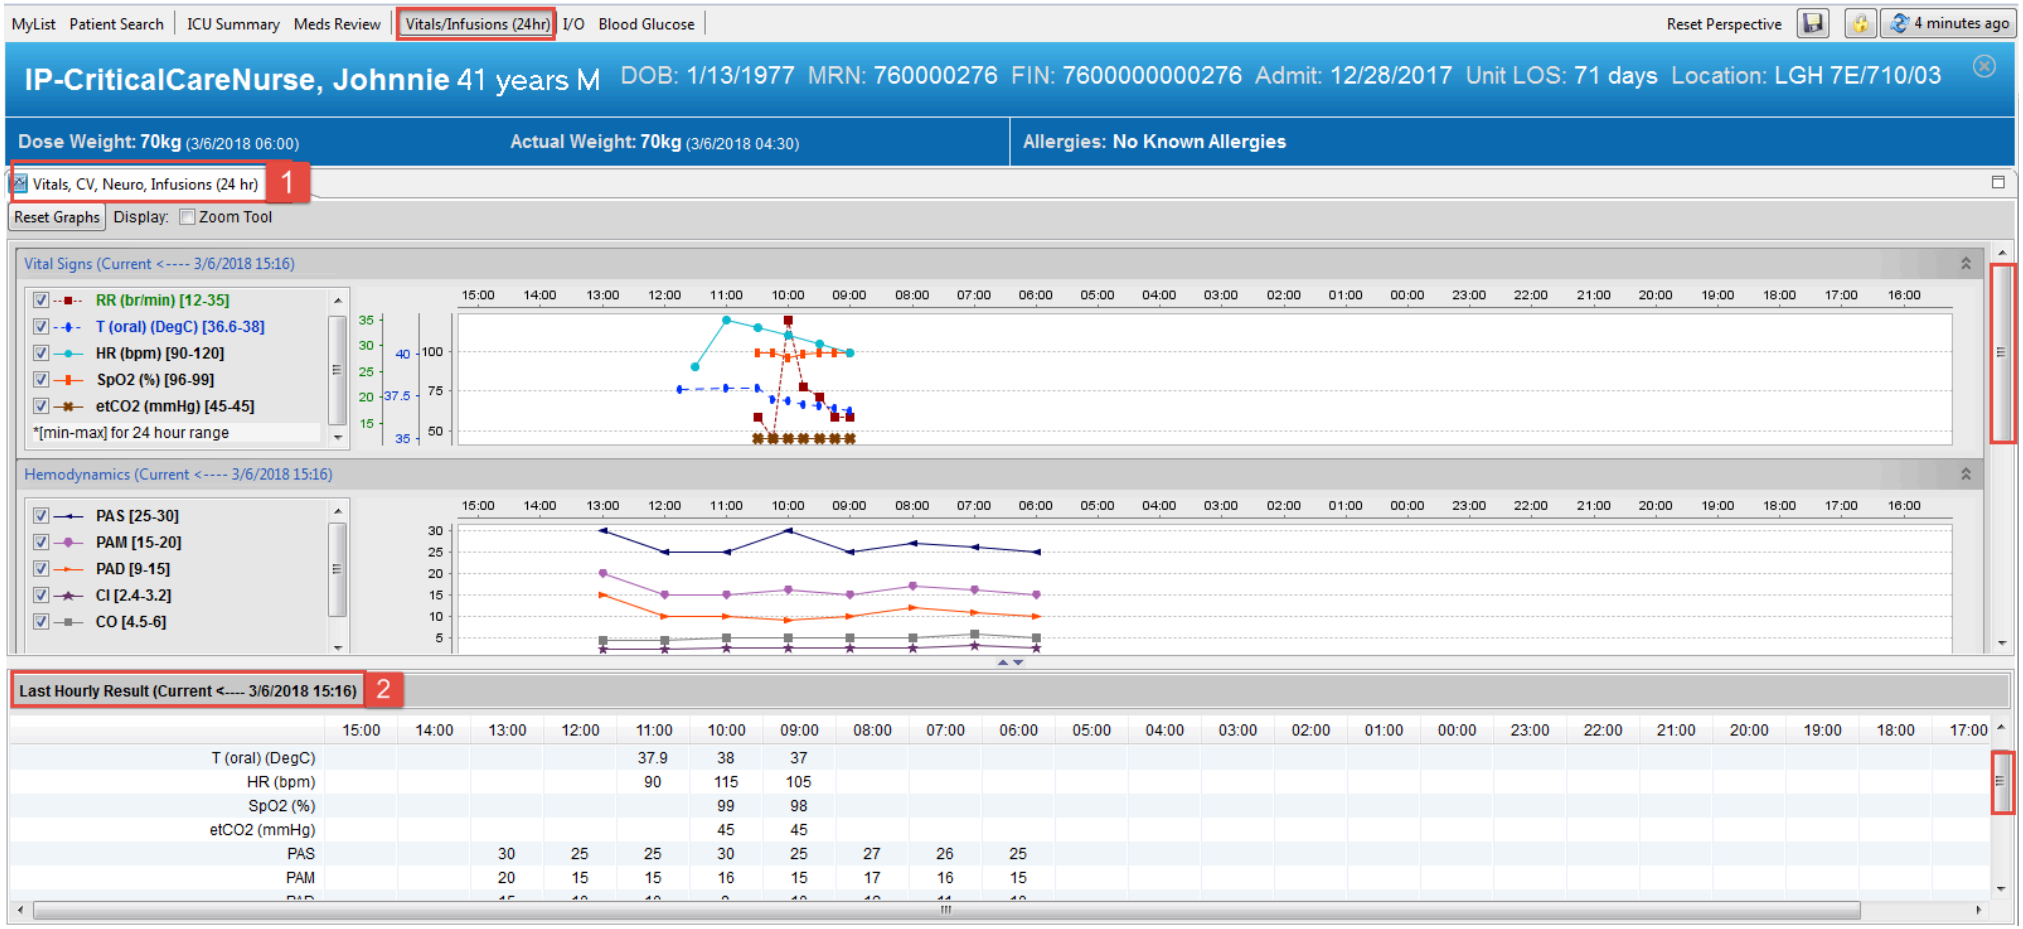
Vitals/Infusions (24hr) Tab

The **Vitals/Infusions (24hr)** page displays the last 24 hours of the patient's vital signs, hemodynamic data, medication infusion rates, and more.

1. **Vitals, CV, Neuro, and Infusion** results in graph formations displays at the top half of the page. This allows the clinician to trend results easily.
2. **Last hourly** numeric results in a table format displays at the bottom half of the page.

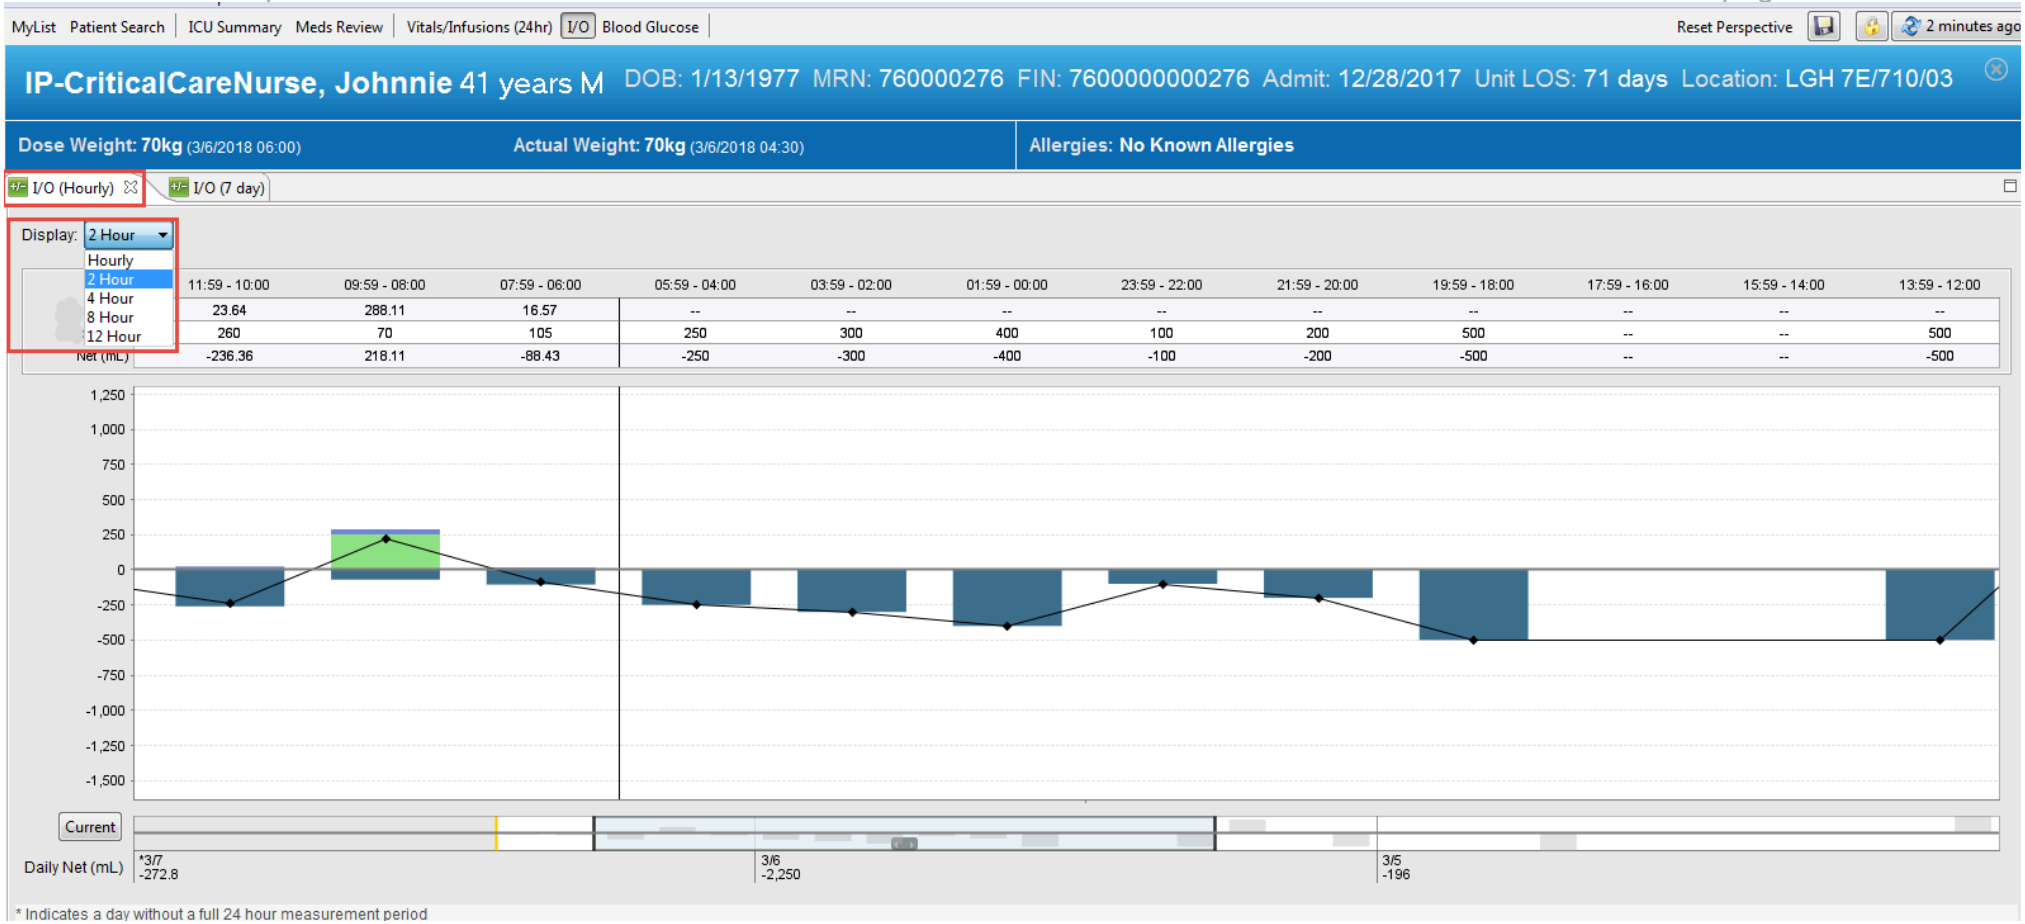


I/O (Intake and Output) Tab

The **I/O** page displays an overview of the patient's intake and output.

1. **The I/O (Hourly)** tab displays hourly results in reverse chronological order, both in numeric and graphical displays.

2. The **Display filter** can be set to display hourly, 2 hour, 4 hour, 8 hour, 12 hour results.



3. The **I/O (7 day)** tab displays intake and output totals for the last 7 days.

IP-CriticalCareNurse, Johnnie 41 years M DOB: 1/13/1977 MRN: 760000276 FIN: 7600000000276 Admit: 12/28/2017 Unit LOS: 71 days Location: LGH 7E/710/03

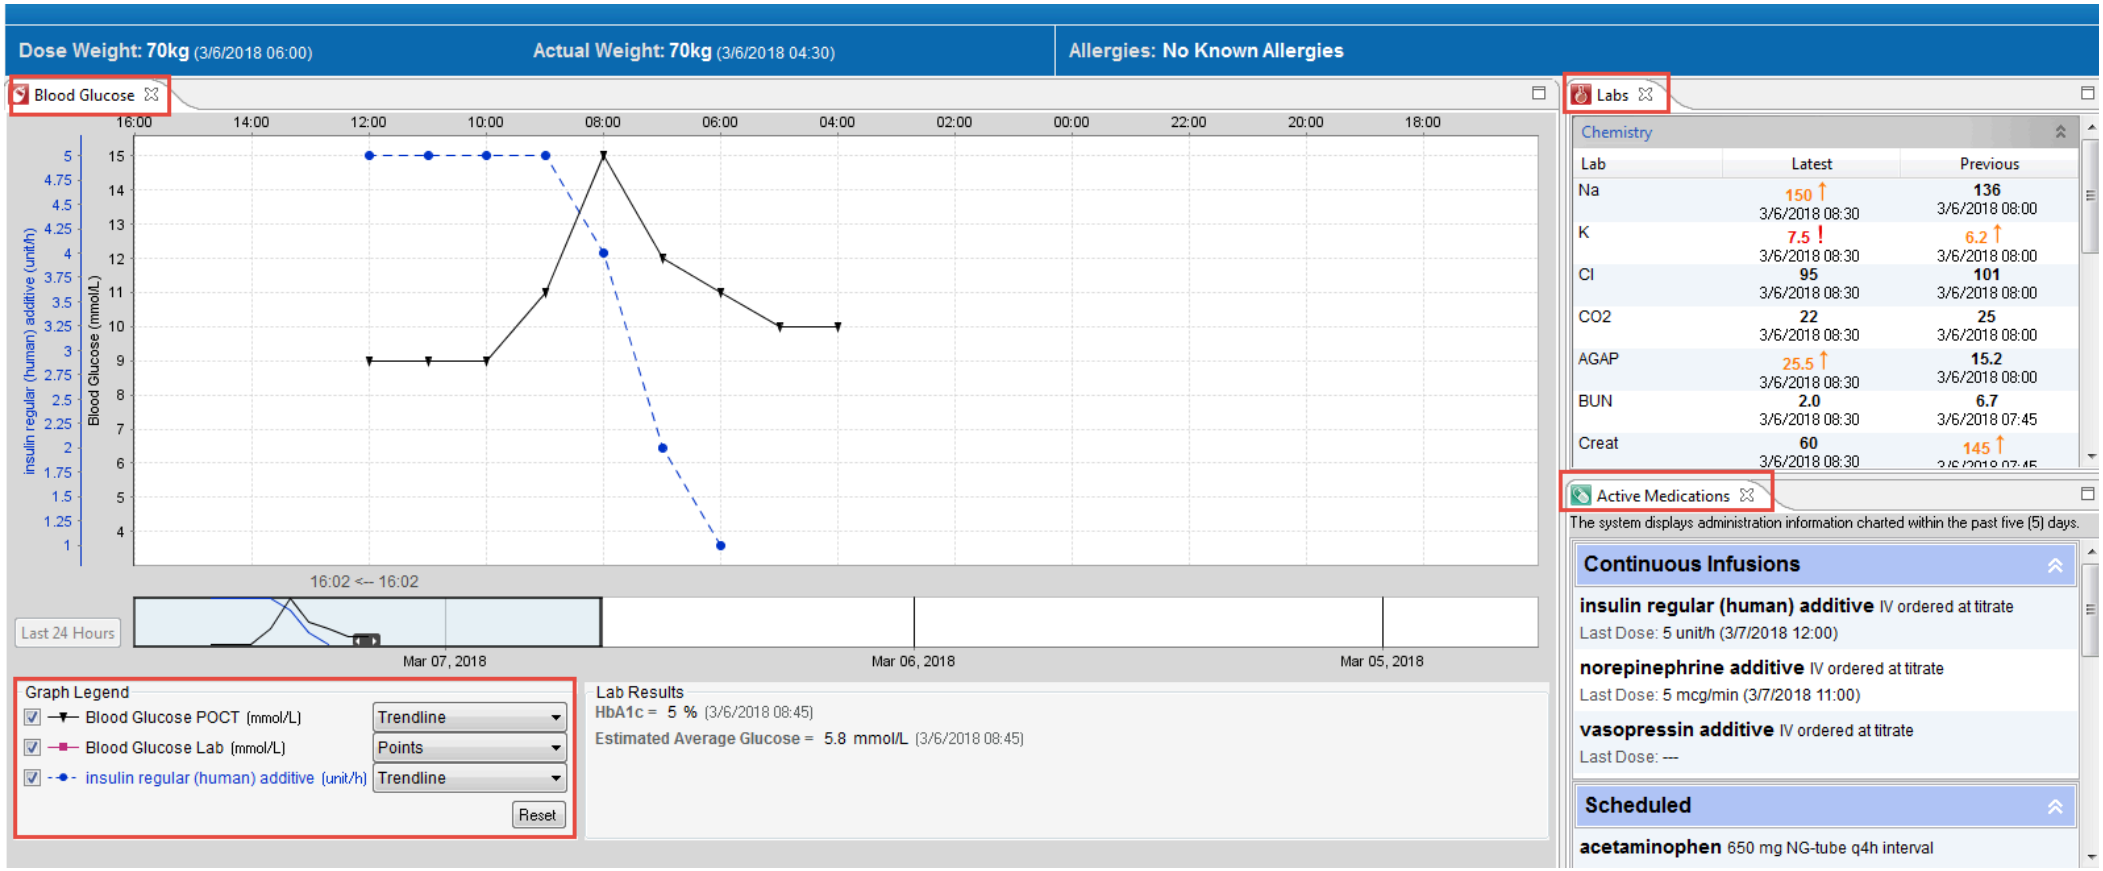
Blood Glucose Tab

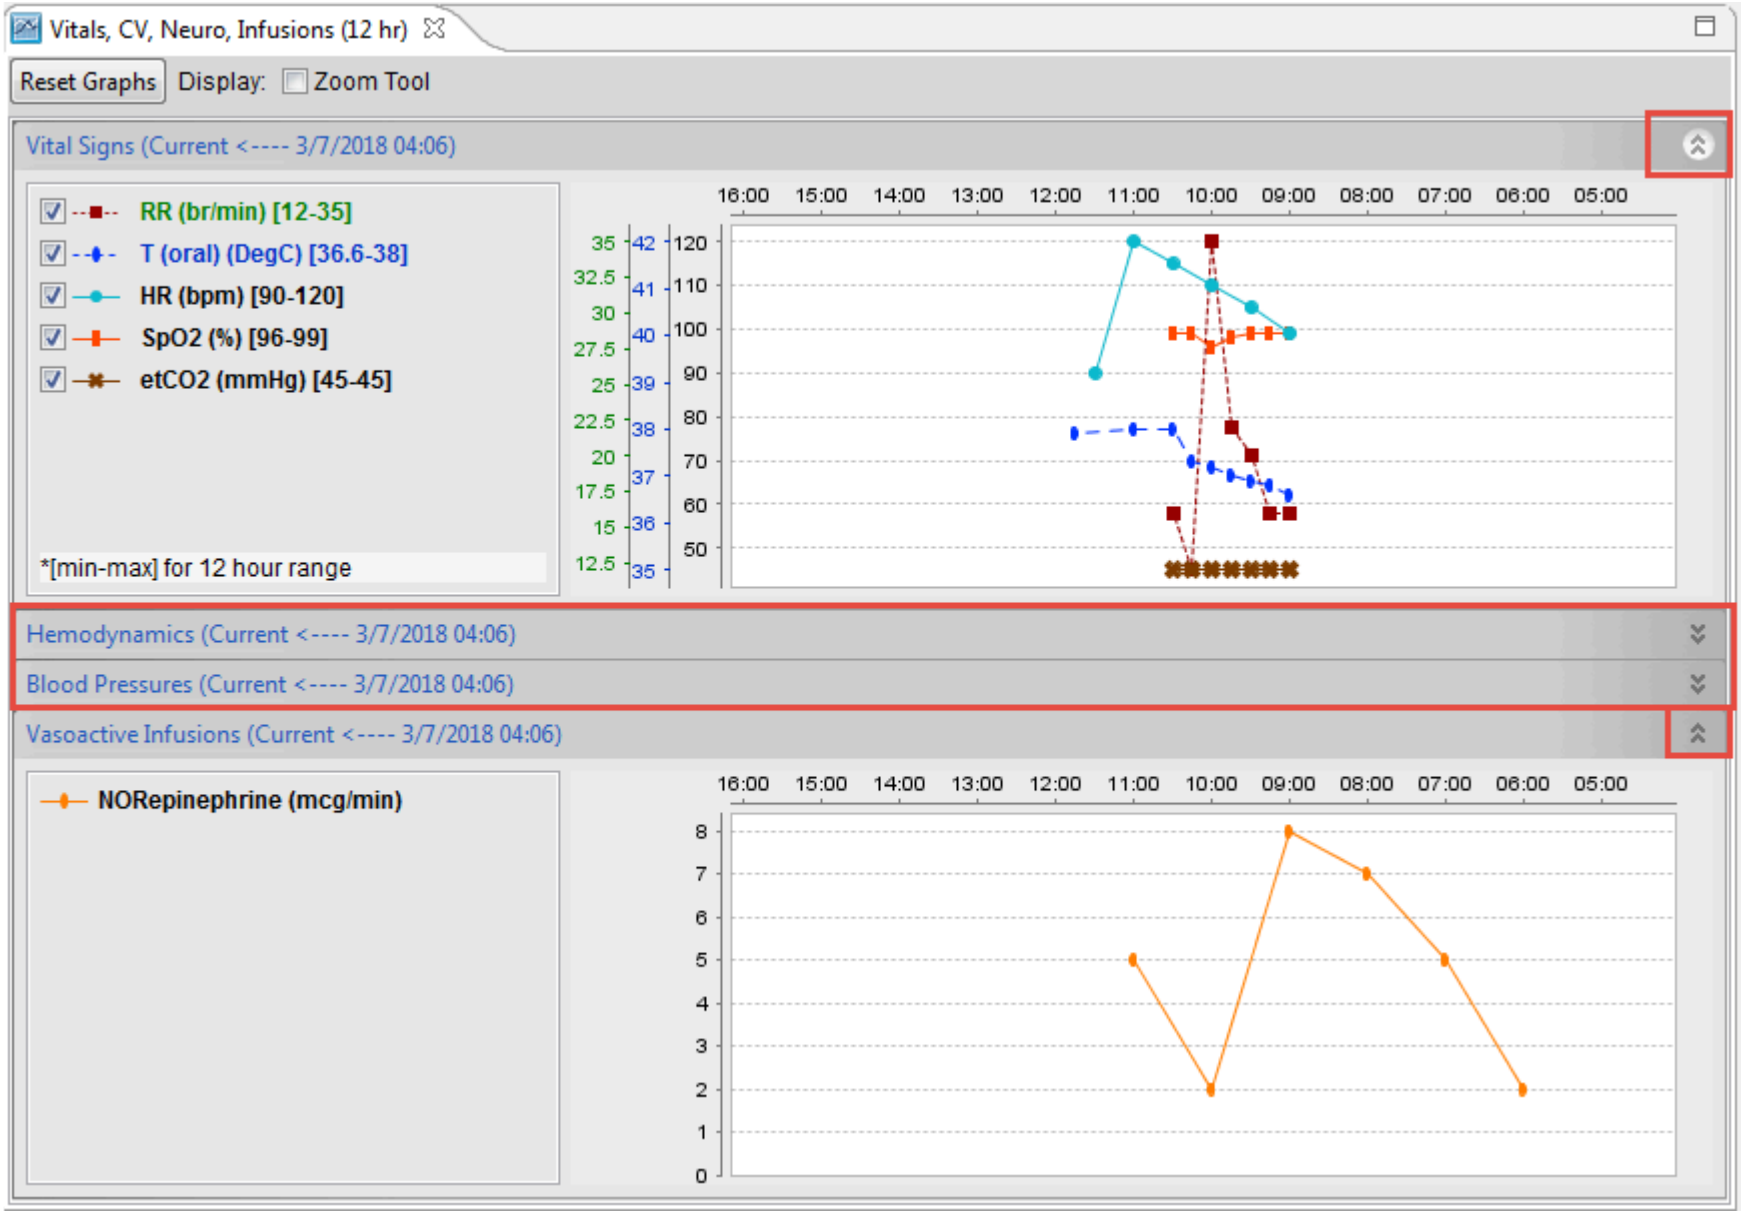
The **Blood Glucose** page displays trending blood glucose and insulin infusion rate results, labs and active medications.



Modify Views in iAware/CACC

You can change your view in **iAware/CACC** to better customize the display by clicking **Collapse** or **open** frames to view specific information.

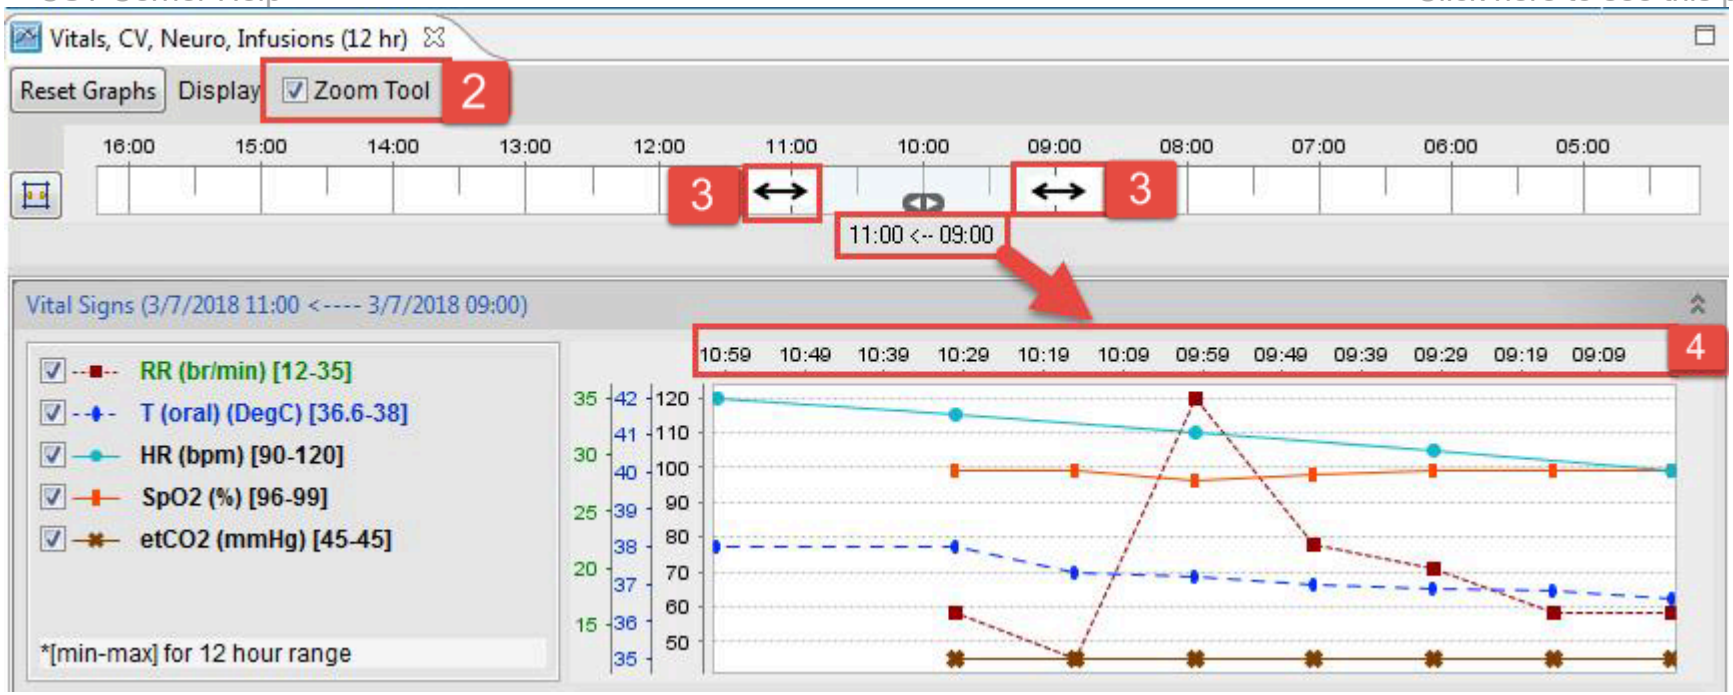
1. Click the **collapse** button will collapse the frame with the title of the frame still in view.



The Zoom Tool can also be used to zoom into specific time frames (e.g. 2 hours from 09:00-11:00).

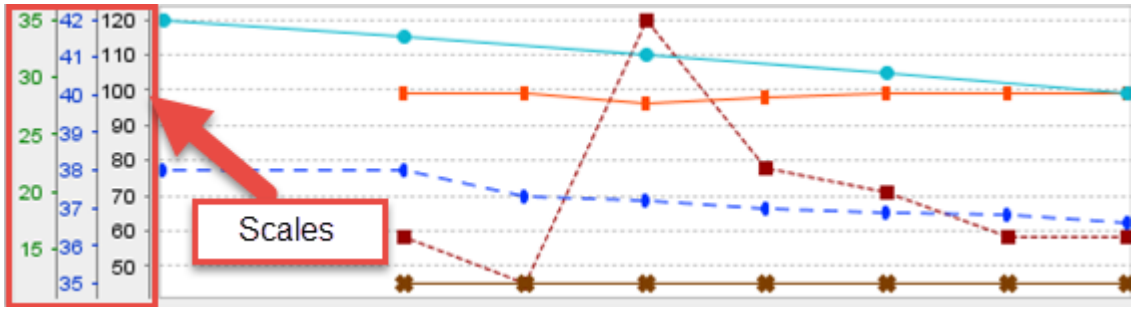
2. Click the **Zoom Tool** checkbox and the Zoom Tool will appear.
3. Click on the edge of the Zoom Tool to slide time frame **arrows** to the time frame you want to be displayed.

4. When the time frame is selected, the graph below will reflect the new time frame.



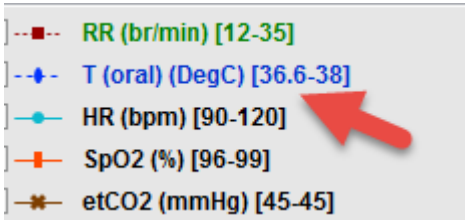
Scales

1. Take note of the scales to the left of each graph, which is used to measure the graphed elements against. The scales are coloured either green, blue or black.



2. Also notice the colour of the text for the measured elements in the Vital Signs, Hemodynamics or Blood Pressure components. These are coloured either green, blue or black.

Click here to see this page in full context



The colour of the text matches the colour of the scale that the data element should be used to measure against.
